HBX RANGE

The HBX is a range of 30W-240W LED Luminaries designed to meet international standards in safety and durability with unsurpassed even light distribution. This is achieved using some of the leading secondary LED optics in the world which ensure that light is distributed to its intended location. Combining leading German manufacturer, OSRAM Opto LEDs with solid thermal management, we extend the expected lifespan of the HBX Luminaries in the African climate. Furthermore, by eliminating moving parts, we have designed this Luminaire to be extremely durable. The HBX range offers a significant increase in light performance while reducing energy usage by up to 75%. Additional savings are made with virtually no maintenance, lamp and labour replacement costs or down time being required. The HBX range is Renewable Ready. By simply replacing a single component it can run straight off renewable sources without the use of inverters making the entire range future proof. The industry standard DALI interface makes dimming and light level controls very easy.

KEY ADVANTAGES

- Extremely reliable LED lamps in IP54 Compartment
- Superior quality OSRAM LED's
- Variable optics ensure units are aesthetically identical, while still optimising light distribution
- Very low maintenance
- 100% designed and manufactured in SA
- Lifespan of 100k hrs, lumen depreciation of not more than 20% (L80B50)
- Suitable for temperatures from -30°C up to 45°C
- Designed for easy retrofit or new installation
- 5 or 8 year warranty options with 12 year design life
- Optional daylight harvesting and DALI control available
- All cable entries IP67 rated glands

APPLICATIONS

- Warehouses
- Event Halls
- Industrial Areas & Workshops
- Freezer Rooms
- Showrooms

The HBX range is designed to be a powerful, yet compact, with ease of installation in mind. The standard bracket can be used for suspended and roof/wall mounting. Installation is optimised with the use of easy to open clips and no tools are required to open the driver compartment. The cable connectors are spring clip operated. Custom mounting brackets can be ordered if needed.

The housing is manufactured from a range of materials, stainless steel (3CR12) and epoxy coated. The optics offers more vandal resistance than glass and the entire fitting is manufactured to the SANS 605-98 standard for safety. The HBX is one of the most powerful units for size and power consumption on the market.

ALX RANGE

The ALX is a range of 15W-240W LED area lights designed to meet international standards in safety and durability with unsurpassed light output in such a small form factor. A range of optics are available for almost any light distribution requirement. This is achieved using some of the leading secondary LED optics in the world which ensure that light is distributed to its intended location. Combining leading German manufacturer, OSRAM Opto LEDs with solid thermal management, we extend the expected life span of the ALX luminaries in the African climate. Furthermore, by eliminating moving parts, we have designed this luminaire to be extremely durable. The ALX range offers a significant increase in light performance while reducing energy usage by up to 75%. Additional savings are made with virtually no maintenance, lamp and labour replacement costs or down time being required. The ALX range is Renewable Ready. Low voltage DC versions are available, making them ideal for emergency lighting and remote location usage. Our ALX range is completed with infra-red (IR) luminaries developed for customers seeking the benefits of energy efficiency and optimised camera performance that LED lighting offers. IR light, which is invisible to the human eye but visible to CCTV cameras, is ideal for surveillance where cameras can see but intruders cannot. Clear images can be captured of intruders who unwittingly believe they are operating under the cover of darkness. Our range is also perfect for area cover where light pollution needs to be avoided such as hotels, residential complexes and parks. The ALX IR range is the perfect choice when retrofitting area lighting, offering the benefits of power savings and preserving your current CCTV system without the need for a costly upgrade.

KEY ADVANTAGES

- Extremely reliable LED lamps in IP67 Compartment
- Superior quality OSRAM LED's
- Variable optics ensure units are aesthetically identical, while still optimising light distribution
- Very low maintenance
- 100% designed and manufactured in SA
- Lifespan of 80k/100k hrs, lumen depreciation of not more than 20%/30% (L80B10/L70B10)
- Suitable for temperatures up to 45°C
- Designed for easy retrofit or new installation
- 5 or 8 year warranty options with 12 year design life
- Universal power input range 97-277VAC

APPLICATIONS

- Area Lighting
- Warehouses
- Industrial Areas & Workshops
- Refrigeration Rooms
- Signage
- Architectural
- Perimeter
- CCTV (IR range)

The ALX range is designed to be powerful, yet compact, with ease of installation in mind. The standard bracket can be used for suspended and roof/wall mounting. Installation is optimised to fit existing 50mm inspection boxes. They can also easily be placed in arrays for high mast lighting. Custom mounting brackets are available on request. The housing can be specified in a range of material including stainless steel (3CR12) and all options are epoxy coated. The optics offers more vandal resistance than glass and the entire fitting is manufactured to the SANS 60598 standard for safety. This makes the ALX the most powerful units for size and power consumption on the market. This, together with our excellent after sales service, makes this product the superior choice for any area light installation.

LED STREET LIGHT

The SLX is a range of 9W-295W LED road luminaries designed to meet international standards in safety and unsurpassed durability with a vast range of optics for almost any light distribution requirement. This is achieved using some of the leading secondary LED optics in the world which ensure that light is distributed to its intended location. Combining leading German manufacturer, OSRAM Opto LED's with solid thermal management, we extend the expected life span of the SLX Luminaries in the African climate. Furthermore, by eliminating moving parts, we have designed this Luminaire to be extremely durable. The SLX range offers a significant increase in light performance while reducing energy usage by up to 75%. Additional savings are made with virtually no maintenance, lamp and labour replacement costs or down time being required. The SLX range is Renewable Ready with various solar add ons available. The Light engines can easily be upgraded making the entire range future proof!

SLX-M 55W IS A CITY OF CAPE TOWN APPROVED FITTING

In Partnership with:

The SLX range is designed to be powerful, yet compact, with ease of installation in mind. The standard adaptor options allow for mounting onto existing 32mm-50mm, 42mm-76mm, 76mm-94mm spigots, with levelling options. Wall mount and options also available. Installation is optimised with the use of easy to open clips and no tools are required to open the driver compartment. The cable connectors are spring clip operated. Custom mounting brackets can be ordered if needed. The housing is manufactured from die cast LM6 marine grade aluminium. The standard High Impact Tempered Glass optic cover is rated at IK08 with IK10 options available that offers more vandal resistance than glass and the entire fitting is manufactured to the SANS 605-98 standard for safety. An optional, integrated Day-Night switch can be ordered, as well as the option for an integrated Nema Base. The SLX is one of the most powerful units for light output vs power consumption on the market. This, together with Eagle Lightings' excellent after sales service, makes this product the superior choice for any road lighting installation.

02 Detection coverage

03 Settings

Detection area

Detection area means detection coverage. It can be adjusted by combining DIP switches for specific application.

Hold-time

Hold-time means the time period the light will be ON after the last detection.

Daylight threshold

Daylight sensor prior to motion sensor. Set threshold for specific needs. If Disabled, only motion sensor works.

04 Application Function Demo-On/off control

With sufficient daylight, even when motion detected, light remains OFF.

With insufficient daylight, when motion detected, light ON.

After the last detection and the present hold time elapsed, light OFF.

Super-compact Version On/off Control

Model: HC005S

The smallest HF motion sensor on the planet, worldwide patented.

Functions and Options

On-off Control

This sensor is a motion switch, which turns on the light on detection of people movement, and turns off after a pre-selected hold-time when there are no people around. A daylight sensor is also built-in to prevent the light switching on when there is sufficient natural light.

With sufficient natural light, the light does not switch on when presence detected.

With insufficient natural light, the sensor switches on the light automatically when person enters the room.

The sensor switches off the light automatically after the hold-time when there is no motion detected.

Wiring Diagram

2 Tri-level dimming control

With Tridonic switchDIM ballast / driver (Excel ballast/driver, corridor function), this sensor can also achieve tri-level dimming control.

Wiring Diagram

3 Zero-cross relay operation

Designed in the software, sensor switches on/off the load right at the zero-cross point, to ensure the in-rush current is minimised, enabling the maximum lifetime of the relay.

4 Loop-in and loop-out terminal

Double LN terminal makes it easy for wire loop-in and loop-out, and saves the cost of terminal block and assembly time.

• Description

LRS-35 series is a 35W single-output enclosed type power supply with 30mm of low profile design. Adopting the full range 85~264VAC input, the entire series provides an output voltage line of 5V, 12V, 15V, 24V, 36V and 48V.

In addition to the high efficiency up to 89%, the design of metallic mesh case enhances the heat dissipation of LRS-35 that the whole series operates from -30°C through 70°C under air convection without a fan. Delivering an extremely low no load power consumption (less than 0.2W), it allows the end system to easily meet the worldwide energy requirement. LRS-35 has the complete protection functions and 5G anti-vibration capability; it is complied with the international safety regulations such as TUV EN60950-1, EN60335-1, EN61558-1/-2-16, UL60950-1 and GB4943. LRS-35 series serves as a high price-to-performance power supply solution for various industrial applications.

NOTE	<ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Tolerance : includes set up tolerance, line regulation and load regulation. Line regulation is measured from low line to high line at rated load. Load regulation is measured from 0% to 100% rated load. Length of set up time is measured at cold first start. Turning ON/OFF the power supply very quickly may lead to increase of the set up time. 5V when the load factor 0~50%, the switching power less is reduced by burst operation, which will cause ripple and ripple noise to go beyond the specifications. The ambient temperature derating of 5°C/1000m is needed for operating altitude greater than 2000m(6500ft). The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." LRS-150 has the complete protection functions and 5G anti-vibration capability; it is complied with the international safety regulations such as TUV EN60950-1, EN60335-1, EN61558-1/-2-16, UL60950-1 and GB4943. LRS-150 series serves as a high price-to-performance power supply solution for various industrial applications.

NOTE	<ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Tolerance : includes set up tolerance, line regulation and load regulation. Line regulation is measured from low line to high line at rated load. Load regulation is measured from 0% to 100% rated load. Length of set up time is measured at cold first start. Turning ON/OFF the power supply very quickly may lead to increase of the set up time. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) The ambient temperature derating of 5°C/1000m is needed for operating altitude greater than 2000m (6500ft).
